Engineer Data

Automated delivery of 20 GIS data pipelines

Automated delivery of 20 GIS data pipelines and app data ETL processes, streamlining infrastructure automation and reporting.

2022 – 2024

20

GIS pipelines delivered without a person in the loop

Situation. The platform ran on a lot of GIS data pipelines and application-data ETL processes, and they were being delivered and watched by hand. Hand-run pipelines create bottlenecks, they drift out of consistency, and worst of all they carry a constant low risk that one quietly fails and nobody notices until the data's already wrong downstream.

Task. Automating the delivery of those pipelines and ETL processes — so the data flowed reliably and predictably without someone shepherding it — was the task.

Action. Twenty GIS data pipelines and the application-data ETL came under automated delivery, end to end. The scheduling, the logging and the failure handling got standardised, so every pipeline behaved the same way and, crucially, you could see when one didn't — a silent failure is only silent if nothing's watching. And they were folded into the existing infrastructure automation and reporting, so they were part of one coherent system rather than a drawer full of scripts someone had to remember to run.

Result. All twenty pipelines and their ETL ran automatically and predictably, and the whole infrastructure-automation and reporting picture got tidier for it. The business got dependable, current data without anyone having to walk it through by hand — and without the quiet-failure risk hanging over it.

Bring this experience to your project

Use “Automated delivery of 20 GIS data pipelines” as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Numbers arriving where they are needed, on a schedule, without anyone copying a spreadsheet at the end of the month.

Tired of running data pipelines by hand?

Talk through your project with the engineer responsible for delivery. We agree the scope, price basis and handover in writing before work begins.

Role context: DevOps Engineer. It draws on Data Engineering, Data Pipelines (ETL/ELT), DevOps, Automation & CI/CD, Reliability & Backups, Monitoring & Observability and GIS / Geospatial. And while you are here, we are rather good at GIS & Geospatial Solutions, Data Pipeline Development (ETL/ELT) and DevOps & CI/CD Automation.
